

## Hero One 600 Pro

SKU SH20-600-Pro

PRICE €345

### FEATURES

- Improves 4G signal for eir, Vodafone, and Three.
- Ideal for rural and remote locations where nearby cell towers are limited
- Delivers clearer calls and more reliable 4G mobile data indoors

INSTANT SIGNAL BOOST

UP TO +72db GAIN

SUPPORTS UP TO 5 USERS CONNECTIONS

FAST NETWORK & DATA SPEED

### ABOUT

Reliable signal begins outside — and Signal Hero One 600 Pro is engineered to bring it reliably indoors. Missed calls, dropped connections and unstable data don't have to define daily life in rural or weak-coverage areas.

Designed for properties primarily using a single mobile provider, Signal Hero One captures available signal from the nearest cell tower through an upgraded outdoor antenna. It transfers that signal using thicker, professional-grade cabling to a pro-grade booster, then redistributes the strengthened coverage indoors via a panel antenna. This configuration is ideal for homes with limited nearby towers, especially **where outdoor signal measures just 1–2 bars.**

Signal Hero One is particularly effective for 4G SIM routers, improving call clarity and stabilising mobile data where outdoor reception exists but indoor performance is poor. The Signal Hero One 600 version expands coverage further by using two indoor antennas, making it better suited for larger properties.

Installation follows a proven residential and rural layout. Our Ireland-based support team is available both before and after purchase.

There are no subscriptions or ongoing costs. **Every unit includes a 60-day money-back guarantee and a 3-year warranty** for complete peace of mind.

### SPECIFICATIONS

|                    |                      |
|--------------------|----------------------|
| MODEL NUMBER       | SH20-600 Pro         |
| FREQUENCIES        | BAND 20<br>800 MHz   |
| MAX GAIN           | 72 dB ±2             |
| IMPEDANCE          | 50 Ohm               |
| POWER SUPPLY       | AC 100–240V          |
| CONNECTORS         | N-FEMALE             |
| BOOSTER DIMENSIONS | 20.6 x 12.5 x 4.8 cm |
| BOOSTER WEIGHT     | <0.6Kkg              |

## INSTALLATION

1

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

2

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

3

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
